Christmas Creative Design Prompt Generator — User Guide

By LaTisha Nixon, Pink Panda Digital

1. What this tool does

A single-file HTML prompt builder for Christmas design work. Pick a theme, a product, and a style — get production-ready Christmas design prompts for your whole holiday lineup. No subscription, no API key, no internet needed after download. It builds prompts only — it does not create images or video itself.

2. Before you start

You need: a browser (Chrome, Edge, Safari or Firefox), the generator file Christmas_Creative_Design_Prompt_Generator.html, and your AI image or video tool for turning prompts into art. Save the file somewhere easy to find. Your choices stay in your browser; nothing is uploaded anywhere.

3. Open the generator

Double-click the HTML file; it opens in your browser like a web page. No install, no login.

4. Step 1 — Pick a design type

26 built-in design types: T-shirt/apparel graphics, seamless patterns, typography-only designs, stickers/die-cut PNGs, transparent PNG graphics, posters/wall art, Christmas cards, gift tags, wrapping paper, tote and mug/tumbler designs, ornaments, notebook and planner covers, digital paper, social posts, flyers, and more. Start with the product you are actually making.

5. Step 2 — Pick a theme

37 themes: Classic, Luxury, Retro, Vintage, Cozy, Glam, Girly, Black Santa/Inclusive, Family, Kids, Funny/Sassy, Faith-Based, Nativity, Winter Wonderland, Candy, Gingerbread, and more. The theme sets the mood of the whole design.

6. Step 3 — Add the details

Subjects, finishes (foil, glitter, rhinestones, velvet, plaid…), typography styles and treatments, color palettes, art styles, audiences, and products. Each choice is added to the prompt automatically.

7. Step 4 — Set production direction

DTF, DTG, screen print, sublimation, vinyl/HTV, UV DTF, embroidery reference, transparent PNG export, seamless repeat tiles — plus layouts, backgrounds, and promotional campaign types (collection launch, holiday sale, Black Friday/Cyber Monday, shipping-deadline graphics). Match this to how the design will actually be made and sold.

8. Generate your prompts

Click Generate Prompts. Use Copy Prompt for one prompt, Copy All Prompts for the set, Save to Prompt Library to keep the ones you love, Random and Surprise Me for fresh ideas, and Download/Export Prompt Text to save your prompts as a text file. The Supplies/Production Notes section reminds you what each production method needs.

9. Turn prompts into designs

Paste a prompt into your favorite AI image or video tool. Generate the artwork, check it against your production needs (transparent background for PNGs, seamless repeat for patterns), and adjust the prompt if the first result is not right — small changes to theme, finish or palette make a big difference.

10. Tips for a strong holiday lineup

Build one collection at a time; keep palettes consistent inside a collection; test one design end-to-end (prompt, artwork, product mockup) before making twenty; save your best prompts to the Prompt Library so you can reuse them next season.

11. Troubleshooting

File opens as text or downloads instead of opening: right-click the file and choose Open with your browser. Nothing happens when you click Generate: make sure you picked at least a design type and a theme, then click Generate Prompts again. The prompt looks too long: remove one or two options (a finish or a background) and generate again. Your browser cleared your library: the Prompt Library lives in your browser on that device, so keep the file in the same browser you built the prompts in.

12. What is included in your package

Christmas_Creative_Design_Prompt_Generator.html (the generator), Christmas_Creative_User_Guide.pdf (this guide), Christmas_Creative_START_HERE.pdf (start-here card), Christmas_Creative_Product_Description.txt (sales description). Cover art: supplied by LaTisha Nixon — this package ships without a product cover image; the cover will be added when she supplies the picture she wants.

This tool builds prompts only. No subscription. No API key. Your information stays on your device.
